Geoffrey Lee · Koral Kulacoglu

THE PROBLEM · OUR PIVOT AFTER MP1 FEEDBACK

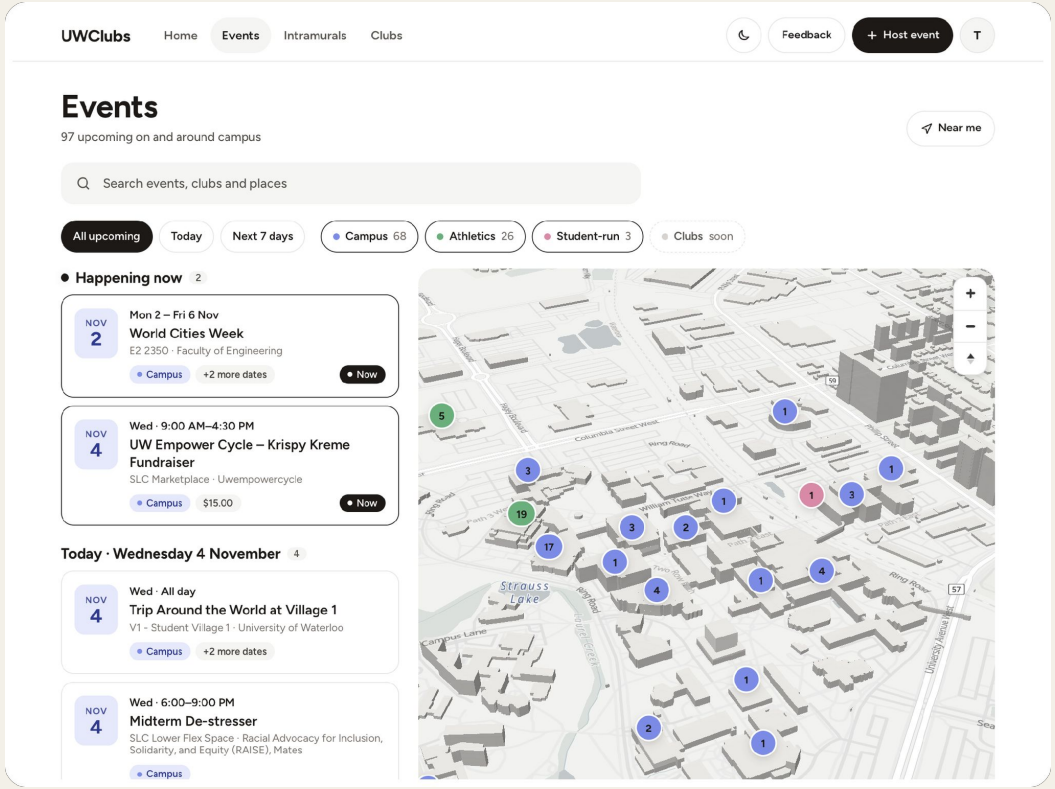

“I don’t know anyone here yet.”

Our bet: first-years will show up if finding something is easy and they don’t have to go alone.

What’s out there, and what’s missing

WUSA directory	No view of what’s on this week
Warrior Rec	No help finding a team
Instagram, Discord	Only clubs you already follow
Luma	One-off events, not campus-wide
UWClubs	**Events, clubs, teams, and a buddy!**

A working app on real campus data

97

upcoming events on one campus map

315

WUSA clubs in one searchable directory

Host, join, team up

Student-run events, RSVPs, and an intramural team finder

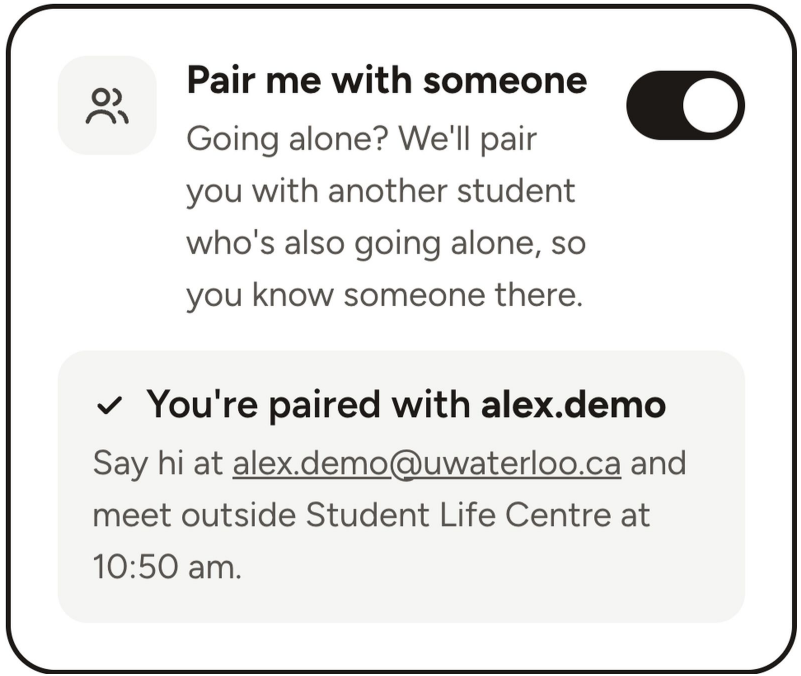

Nobody has to go alone

1 **Join the event**
Pairing unlocks once you're going

2 **Turn on pairing**
We match you with someone also alone

3 **Meet your buddy**
You're given their email and where to meet

Suggested by a real user, built for trust:
@uwaterloo.ca only, meeting 10 minutes early.

First-years are already hosting on it

6 first-years tried it and liked it

3 events they added themselves

HOSTED BY FIRST-YEARS

Student Tech Networking
Sat Nov 7, 12 pm · Student Life Centre

UW Hackathon
Sat Nov 14, 10 am · Mathematics and Computer Building

Engineering Project Showcase
Sun Nov 15, 1 pm · Engineering 7

Next: invite more first-years to find and join these events.

How we worked

Bhuvnesh	App foundation, importers, map, clubs, intramurals
Arjun	UI design, Home, buddy pairing, MP2 prep
Aum	Supabase setup and reaching out to students
Geoffrey	In-app feedback button and PR reviews
Koral	Issue tracking, time log, PR reviews and testing

Meetings
Tue and Thu at 4 pm,
plus ad hoc Sundays

35 GitHub issues tracked,
13 closed so far

7 major PRs merged, 78
commits on main

Our use of AI

What we used	**Claude Code** UI ideas, project scaffolding, and feature drafts
What worked	**Fast first drafts of features and help with setup** We made sure that a team member reviewed all merged code
What didn't	**AI code can look finished before it really is** Our database move passed 77 checks, but another review still found 6 bugs

Kept human: the team decided the problem, the scope, and what success means.

Lessons learned and what's next

Went well

Real campus data made the app useful from day one, and first-years liked it enough to add their own events

Needs improvement

Key work sat with one person at a time, so the rest of us got stuck waiting. In MP3, every task gets a backup owner and shared access.

Next iteration

Invite more first-years
Target: 4 of 5 find an event they'd attend

Profiles, so first-years pair together
Year and program (#25) to increase trust

Safer pairing
Reporting and blocking (#32)

Real sign-up emails
Verification codes that reach students (#22)
